

About NeuronEX

NeuronEX is a financial system project by NEURONholding, a company incorporated in Estonia, having its registered office at Harju maakond, Tallinn, Nõmme linnaosa, Kalda tn 9a, 11625, Estonia. Its mission is to combine the advanced blockchain technologies and the cryptoworld technologies for application in the real sector of economy and day-to-day life. Creation of a user-friendly, secure, unobtrusive and profitable financial system managed by owners in the interests of customers and their own interests.

Imagine a financial system that integrates virtual and real worlds. A system that has accumulated cutting-edge management and security technologies and solutions. A system with the lowest cost of transactions and lightning-fast transfers worldwide, a system capable of interacting with and storing files of transactions and smart contracts from any blockchains. A financial system owned and created by people. We are glad to present to you the NeuronEX platform.

NeuronEX Financial System using a proprietary blockchain with a hybrid consensus mechanism (DPOI and TaPOS) is a brand new, innovative advance in the financial world that guarantees trust, security, speed and accessibility both to businesses and customers. All financially significant actions within NeuronEX will be based on blockchain smart contracts of a new generation and constitute an integral and indispensable part of transactions to be undertaken.

As NeuronEX customers you can forget about closed doors of banks and huge transfer fees, high costs of services, long waiting lines and lengthy transactions. We set our minds on this project because we had also travelled this way as final users and people with over 20 years of experience in banking operations. This is precisely why the NeuronEX team is an alliance of top experts in banking technologies and applied sciences, Ph. D. in mathematics and leading IT engineers with an extensive record of managing real business and projects and, importantly, connections in financial and IT industries.

The first and primary objective of NeuronEX is drawing together the “virtual” cryptocurrency world and that of the real economy, and adding a new dimension to the use of cryptocurrencies that blurs out differences between crypto and fiat currencies.

The second, equally important objective is creating a new and secure environment that is independent from regulators and user-friendly both for financial entities, payment systems, banks, agents, and ordinary people. A transparent and accessible service for banking operations, a financial world free from bureaucracy, fraud and deception.

The priority task of NEURONholding is caring about the wellbeing of its customers through development and continuous improvement of NeuronEX. The social facet of its activities is financing R&D in discrete mathematics, cryptography and quantum technologies.

NeuronEX is a new generation financial system. Join us in the financial technologies of the future NOW!
